## V5422L / V5422E ACTUATED BUTTERFLY VALVES

## SPECIFICATION DATA

## GENERAL

The V5422L and V5422E Actuated Butterfly Valves are suitable for heating and cooling applications as well as in boiler management systems. They can also be employed for industrial applications, general services, water treatment, etc.

The V5422L series is equipped with floating-control actuators (230 V, three-point).

The V5422E series is equipped with modulating-control actuators with a standard control signal of $0 \ldots 10 \mathrm{~V}(2 \ldots 10 \mathrm{~V}$, $0 . . .20 \mathrm{~mA}$, and $4 \ldots 20 \mathrm{~mA}$ also possible).

The actuators and valves are provided factory-mounted. The position control and the end stops are completely justified.

## FEATURES

- With factory-mounted electric actuator
- Centric butterfly valve with elastomer liner
- Wide DN range (DN250 through DN600)
- For heating water containing up to $50^{\circ}$ glycol
- Wafer body
- For modulating and floating control
- maintenance-free control drive
- mechanical setting indicator
- includes manual operation
- ample reserve torque
- sizable terminal compartment for cabling
- long unit lifetime

SPECIFICATIONS
Valves

| Sizes | DN250...DN600 |
| :--- | :--- |
| Nominal pressure rating | PN10 |
| Shut-off pressure | 10 bar |
| Tightness | bubble-tight |
| Temperature of medium | $-10 \ldots+130^{\circ} \mathrm{C}$ |
| Body | Wafer, ductile iron GG25 |
|  | Rilsan/epoxy-coated |
| Liner | EPDM EW (max. $130^{\circ} \mathrm{C}$ ) |
| Disc | GGG40, epoxy-coated |
| Shaft | Stainless steel 1.4028 (AISI 420) |

## Actuators

Motor voltage
Current, running time
Angle of rotation
Duty cycles
Running noise
Ambient temperature
Motor insulation
Protection class
Cable gland
$230 \mathrm{Vac}( \pm 10 \%), 50$ to 60 Hz See Table 1 $90^{\circ}$
max. 30\% (class S4 IEC60034) 65 dBA
$-20 . .+70^{\circ} \mathrm{C}$
class F according to VDE 0530
IP67 as per DIN 40050
PG16, cable $\varnothing 9 \ldots 16 \mathrm{~mm}$

Table 1. Type list for different valve sizes and corresponding data

| Floating version | Modulating version | Actuator current (A) |  | Run time (sec) | Actuator torque (Nm) | Valve size (DN) | $\begin{gathered} \text { Kvs } \\ \left(\mathrm{m}^{3} / \mathrm{h}\right) \end{gathered}$ | Weight (kg) |
| :---: | :---: | :---: | :---: | :---: | :---: | :---: | :---: | :---: |
|  |  | Nominal | Start |  |  |  |  |  |
| V5422L1006 | V5422E1001 | 1.2 | 1.7 | 30 | 600 | 250 | 4800 | 39.2 |
| V5422L1014 | V5422E1019 | 1.2 | 1.7 | 30 | 600 | 300 | 7000 | 48 |
| V5422L1022 | V5422E1027 | 2.0 | 3.0 | 30 | 800 | 350 | 8300 | 60 |
| V5422L1030 | V5422E1035 | 1.2 | 1.7 | 60 | 1200 | 400 | 11000 | 87 |

| V5422L1063 | V5422E1068 | 2.5 | 3.5 | 120 | 4000 | 600 | 25000 | 250 |

## GENERAL CHARACTERISTICS

## Position Indication and Running Status

The actuator's position is indicated by a mechanical pointer located behind a window on the actuator's cover.

The actuator's running status is indicated by three LED's located on the printed circuit board:

- The green LED (Op) is lit when the valve has been opened.
- The red LED $(\mathrm{Cl})$ is lit when the valve has been closed.

## Angle Limitation

The angle at the drive shaft can be adjusted to between $0^{\circ}$ and $90^{\circ}$.

The end position is limited both electrically and mechanically. The electrical limitation can be adjusted by pressing and turning (with a screwdriver) the adjustment screws situated on the white and black cams.

The end position is factory-set to $-2^{\circ}$ and $+92^{\circ}$. As a rule, it is not necessary to alter this value.

## Emergency Manual Operation

## A CAUTION

Before manually adjusting the valve, you must first disconnect the power supply.

It is possible to adjust the valve using the full-disk manual safety wheel.

Actuators with a valve size of DN500 and DN600 are equipped with a manual safety wheel which is declutched automatically when the motor is running. Prior to using the manual safety wheel, it must be re-engaged using the declutch button.

In the case of actuators with a valve size of DN250 and DN300, the motor can be disengaged using the motor declutch lever. manual safety wheel

## Motor and Gear Protection

The actuator motor is protected against overheating by a bimetal temperature monitor.

The motor and gear train are also protected against mechanical overload by a torque limiter switch. The yellow LED $(\mathrm{Tq})$ is lit when the torque limiter has been activated.

## Maintenance

The actuators are maintenance-free. They are lubricated for a minimum of 100,000 operations.

If it becomes necessary to renew the grease completely, use a lubricant complying with the following specifications:

- temperature range: $-30 \ldots+135^{\circ} \mathrm{C}$
- penetration: ASTM $265 / 295$ at $25^{\circ} \mathrm{C}$
- drop point: $180^{\circ} \mathrm{C}$
E.g. ELF Expecta 250, TOTAL Multis EP2, SHELL alvania EP2, MOBIL Mobilux EP2, or ESSO Beacon EP2.

## Flow Rate and Pressure Drop

Fig. 1. Flow rate and valve pressure drop

## Floating Control (V5422L)

The V5422L series is equipped with a printed circuit board (see Fig. 2). This board is situated under the cover, where the angle indicator is likewise located. To access the printed circuit board, remove the cover.

Fig. 2. Printed circuit board of the V5422L

## Microswitch Positions

For floating control, the microswitches located on the printed circuit board (see ig. 2) must be positioned as shown in Eig. B.

Fig. 3. Microswitch settings for V5422L

## Input Terminals

An external floating controller controls the actuator of the V5422L. This controller transmits the phase to input 31 (for closing the valve) or to input 32 (for opening the valve). See also Eig. 8.

## Output Terminals

In the "closed" end position, output 51 transmits the phase to an external indicator. In the "opened" end position, output 52 transmits the phase to an external indicator.

## Modulating Control (V5422E)

The V5422E series is equipped with a printed circuit board (see Fig. 4). This board (together with a feedback potentiometer) is situated under the cover, where the angle indicator is likewise located. To access the printed circuit board, remove the cover.

Fig. 4. Printed circuit board of the V5422E

## Microswitch Positions

Fig. 5 shows the settings of the microswitches located on the printed circuit board (see Fig. 4] at delivery-time.

Fig. 5. Microswitch settings for the V5422E at delivery

Microswitches 1, 2, 3, and 4 are used to set the input signal range ( $0 / 2 \ldots 10 \mathrm{~V}$ or $0 / 4 \ldots 20 \mathrm{~mA}$ ) and the corresponding output signal (see Table 2).

Table 2. Resetting Microswitches

| input/output <br> signal | Microswitch positions |  |  |  |  |  |  |
| :---: | :---: | :---: | :---: | :---: | :---: | :---: | :---: |
|  | $\mathbf{7}$ | $\mathbf{6}$ | $\mathbf{5}$ | $\mathbf{4}$ | $\mathbf{3}$ | $\mathbf{2}$ | $\mathbf{1}$ |
| $0 \ldots 10 \mathrm{~V}$ | A | A | A | B | B | B | B |
| $2 \ldots 10 \mathrm{~V}$ | A | A | A | A | B | B | B |
| $4 \ldots 20 \mathrm{~mA}$ | A | A | A | A | A | A | A |
| $0 \ldots 20 \mathrm{~mA}$ | A | A | A | B | A | A | A |

## Terminals for Input/Output Signals

An external modulating controller controls the actuator of the V5422E by means of an analog signal provided at terminal $70 / 71$. An analog output signal for position indication is provided at terminal 71/72.

## Adjusting the Input/Output Signal Offset

The offset of modulating actuators is adjusted at the factory and should not be changed. If you wish to change the offset (using offset potentiometer P2; see Fig. 4), note that a excessively small offset will result in oscillation of the actuator.

## Reversing Rotation Direction

In the case of the V5422E, it is possible to reverse the direction of rotation of the valve by adjusting the feedback signals. The feedback signals are adjusted by resetting the microswitches and replugging the feedback potentiometer's cables. To do this, proceed as follows:

1. Turn the power off.
2. Reset the microswitches as shown in Table 2, but with microswitch 7 in position B.
3. Replug the feedback potentiometer's cables as shown in Fig. 6

Fig. 6. Replugging the feedback potentiometer's cables
4. Apply the desired control signal ( 10 V or 20 mA , as the case may be) for the closing position.
5. Turn the power back on.
6. Using a small screwdriver, adjust the potentiometer P1 (located on the printed circuit board; see Fig. 4) until the valve closes completely.

## Valve Mounting

Install the actuated valve in the pipe according the following steps (see also Fig. 7).

1. Spread the valve's flanges to facilitate installation. The valve's disc must be partially open.
2. Set all stay-bolts while keeping the valve's disc slightly open and without tightening the nuts.
3. Open the valve's disc completely. Ensure that the piping is aligned. Tighten diagonally opposite the nuts until the flanges are in contact with the body of the valve. Never use gaskets or grease. Never weld the flanges after the valve has been installed.

Fig. 7. Remounting the valve

## Bolting

The following table lists the number ( $n$ ) of bolts and nuts required for mounting. The number ( n ) is dependent upon the size (DN).

Table 3. Bolts and nuts required for installation

| DN | Bolts (M x length) | $\mathbf{n}$ |
| :---: | :---: | :---: |
|  | $M 20 \times 150$ | 12 |
| 250 | $M 20 \times 160$ | 12 |
| 300 | $M 20 \times 160$ | 16 |
| 350 | $M 24 \times 190$ | 16 |
| 400 | $M 24 \times 240$ | 16 |
| 450 | $M 24 \times 260$ | 16 |
| 500 | $M 27 \times 300$ | 16 |
| 600 |  |  |
